

CurXor OS

A sovereign AI system on your desk — with digital employees

\$3M seed SAFE · 18 mo · 5 people max

\$3,999 once · \$0/mo operate-plane API · proof-ready · pre-revenue

\$3,999 once · \$0/mo operate-plane API · proof-ready · pre-revenue

v1.1.0 · July 2026 · Sovereign Agent Appliance

Founder story — 20 days

Jun 18 — named CurXor in public · origin thread

Jun 19 — first commit · Claw OS on laptop

Week 1 — four flagship Claws + Forge + agent runtime

Week 2 — validation hardware unboxed · Cafe · Build Plane

Week 3 — v1.0.0→v1.0.3 · G1/G2/G3 · film pack

182 commits · 239 smoke · 38 tok/s on validated metal

Why now

Aspiration — culture says use AI; operators stall after drafts/polish

Setup — always-on still means repos, keys, scripts, five tabs

Product shape — chat rent · cloud agents · home cloud · light boxes

Nobody ships vertical digital employees OOTB on metal you own

Desk-ready compute — local inference on operator-grade UMA is real

What we build

CurXor box + CurXor OS (validated on MS-S1-class metal)

Four pillars — compute · engine · mesh · Flight Command

Ten Claws — Capital · Creator · Work · Forge · Cafe + honest previews

Forge — mint custom Claws on-box · Cafe — inter-Claw proof

Local cognition · egress you wire and can unplug

Stack proof

G1 golden path · Jul 1 — on device

G2 golden release · v1.0.0–v1.0.3

G3 film pack · Jul 8 — inception · investor proof · desk strips

239 smoke · qwen3:8b · 38 tok/s · 4.56/64 GB

curxor.ai live — G3 stills · /signal · press kit

Competition

Personal cloud / home server → apps, not vertical outcomes

DIY agent kits → 200 hours assembly · no egress product

Light assistant appliances → chat/messaging · limited compute

SaaS / cloud agents → API rent · their retention

CurXor = operator desk with digital employees + kill switch

Business model — current · evolving

Today: \$3,999 once · \$0/mo operate API · ten Claws + Forge · BYOK optional
Pre-order live · pre-revenue by design (proof-first)

Grows: Standard→Pro 128→Studio · Claw unlocks · Forge mint · additive bridges
Hardware anchor · OTA on metal you own — not another rent trap

PMF honesty

Green — G1/G2/G3 · v1.0.3 · 239 smoke · G3 film pack

Yellow — Flagship dogfooded · paper/sim on camera · hero Act I live

Red — ARR · live fills · custom CurXor hardware (Act II)

Proof-ready now · traction-ready after G4 external UAT

Use of funds — \$3M seed

People (eng · design · ops) — 45%

Act II hardware exploration — 30%

Onboarding / GTM — 10%

Ops / buffer — 15%

18 months · ≤ 5 people · prove Act I · own metal in Act II

Ask + links

Warm intros · live box demo on LAN :3080

curxor.ai · /signal · press · inception reel · investor proof

Essay + origin thread · ankur@curxor.ai · @ankurmisra

No cold spam · no public raise posts · sovereign metal · one invoice

Appendix — maturity & disclaimers

Area	Status
Software v1.0.3	G1/G2/G3 green · 239 smoke · 40 user flows
Flagship Claws + Forge + Cafe	G3 demo depth · Capital paper on camera
Local LLM (ROCm on box)	qwen3.8b · 38 tok/s · validated Jul 2026
Digital bridges (Alpaca / X)	Coded · founder-keyed until Ops Wave 1
MS-S1 MAX validation	Unboxed · G1–G3 closed · Act I proof plane
Custom CurXor hardware	Act II · post-raise

Disclaimers

- No guaranteed returns — Capital Claw performance is strategy-dependent.
- Creator posts require explicit operator skill approval before bridge egress.
- Paper trading on camera; live trades via Alpaca on eno2 only when configured.
